World Leader in Adapters, Clips, and Test Accessories

Emulation Technology, Inc., RoHS Compliance Policy

August 15, 2005

Emulation Technology, Inc., is committed to manage its business in an environmentally responsible manner and ET has RoHS initiatives to support those customers that require RoHS compliant products. The RoHS term is an acronym for European Directive 2002/95/EC on the "Restriction of the use of certain Hazardous Substances in electrical and electronic equipment."

Existing ET manufactured products may or may not be RoHS compliant as currently designed. The customer should contact ET Sales Department to determine if specific product part numbers are RoHS compliant.

For new custom products, ET will manufacture and certify products that are RoHS compliant if specified by our Customer. If product is not specified RoHS compliant, ET will design and manufacture using the appropriate materials and processes necessary for that product.

ET is not responsible for identifying the RoHS compliance of any consigned material.
